Dakota	115 km/h	70 mph	130 km/h	80 mph	115 km/h	70 mph	130 km/h	80 mph

5 STEPS FOR A COMPLETE WEATHER-TITE™ ROOFING SYSTEM

1 EAVE PROTECTION

Considerable damage to the eaves can be caused by ice that builds up during winter freeze/thaw cycles. **Progard Ultra** or **Grippard SX** waterproofing membranes will provide the necessary protection.

2 UNDERLAYMENT

To shed water that is driven under the shingles by high winds. High-performance **BP lined asphalt felts** or **BP Deckgard** will provide top notch secondary protection.

3 STARTER SHINGLES

Use **BP starter strip shingles**, this cost-effective step reduces installation time and reduces waste by eliminating shingle scraps. Provides excellent prevention against wind blow off and water infiltration between the shingles.

4 SHINGLES

The proper selection and installation of deck, eave protection, and underlayment form the basis for a well constructed roof that ensures the shingles selected perform to their maximum capabilities. Choose from **Classic 3-Tab** or premium **architectural** shingles featuring two bands of high-tack adhesive. Moreover, the patented Weather-Tite™ Technology guarantees hurricane-resistant performance. The shingles you select will determine the ultimate longevity of your roof.

5 HIP & RIDGE

Cap off your roof with peak protection using **BP Meridian HR 3-D Hip & Ridge** or cut-off **3-Tab shingles** for an attractive, finished look that enhances your home's curb appeal.
